Research interests: vegetable crops, breeding and seed production of vegetable crops, breeding and technology of tomato varieties, genetics resources, resistance to biotic and abiotic stresses

Dr. Daniela Ganeva (female) full professor, PhD in Plant breeding and seed production of the cultivated plants at the Department of Breeding at the Maritsa Vegetable Crops Research Institute.

Her research work is mainly focused on development of new tomato F₁ hybrids and varieties with increased productivity, good morphological characters, resistant to biotic and abiotic stress. She studies wild species, local and breeding materials. Prof. Ganeva is an author of 8 new developed tomato varieties and F1 hybrids for fresh consumption and processing. She is the co-author of the Technology of growing of indeterminate tomato on trellis. Prof. Ganeva is a leader and participant of National and EC research projects. She has published over 100 publications, 30 popular scientific articles, 6 brochures and she has been cited over 200 times. Prof. Ganeva is a member of the editorial board of the magazine “Agricultural Technics”.
